## PunyInform v5.8 quick reference

More information on last page.

## Library variables

action

The current action, e.g. ##PutOn.

action\_to\_be

The action currently being considered, during parsing.

actor

The creature that is currently being ordered to do something – usually the player.

buffer

The array where player input is kept.

clr bq

z5+ only: Background colour.

clr fg

z5+ only: Foreground colour.

clr fginput PUNY++

z5+ only: Player input colour.

clr fgstatus

z5+ only: Status line colour.

clr on

z5+ only: Set to true to enable colours.

consult from

The first word number of a topic in player input.

consult words

The number of words of a topic in player input.

deadflag

0 = game is on, 1 = player is dead, 2 = player has won, 3+ = game is over - DeathMessage () prints why.

inp1

Usually equals noun, but is 1 if noun is a number.

inp2

Usually equals second, but is 1 if second is a number.

input action PUNY++

The original action, derived from player input.

```
input direction PUNY++
```

The original value of selected\_direction, derived from player input.

input noun PUNY++

The original value of noun, derived from player input.

input second PUNY++

The original value of second, derived from player input.

inventory stage

See invent property.

inventory style

0 = tall, 1 = wide. Can be set by game. If OPTIONAL\_FLEXIBLE\_INVENTORY has been defined, player can change it ("inventory tall/wide").

keep silent

Set to true to make most group 2 actions silent.

location

The room where the player is, or thedark if it's dark.

lookmode

1 = normal, 2 = long, 3 = short. Long mode shows the room description on every visit, short never. 1 is default. Many games set it to 2 in Initialise.

meta

Is true if action is a meta action, like ##Save.

no implicit actions

Set this to true to disable all implicit actions.

normal directions enabled PUNY++

Is normally true. Set it to false to stop the library from recognizing the normal directions (N, S, UP, IN etc).

noun

The primary object of the current action, if any.

num words

The number of words in player input.

parse

The array to keep track of the words in player input.

parser action

In a parse\_name routine, set this to ##PluralFound if a match was made and it's in plural form.

```
player
```

Points to the object that represents the player.

real location

The room where the player is, even if it's dark.

receive action

The action (##Insert or ##PutOn) that caused the fake action ##Receive.

run after routines arg 1 PUNY++

Argument for message (See run\_after\_routines\_msg).

run after routines msq PUNY++

Action routine sets to a message# or 1, to run afterroutines. 1 means "run after routines, no message". Action routine can also set run after routines arg 1.

scope modified PUNY++

If OPTIONAL\_MANUAL\_SCOPE has been defined, set this to true whenever (possibly) changing what's in scope.

scope reason ~PUNY

Used in InScope routine (but not in add to scope).

scope stage

Used in scope token routines referred to in the grammar.

score

The current score.

second

The secondary object of the current action, if any.

selected direction PUNY++

The direction matched in input, if any, e.g. n to.

ship directions enabled PUNY++

If  ${\tt OPTIONAL\_SHIP\_DIRECTIONS}$  is defined, set this to true/false to turn ship directions, e.g. 'aft', on/off.

task done

A byte array to note which tasks have been completed. Achieved updates this. Requires TASKS\_PROVIDED.

task\_scores

A byte array with scores for tasks. Requires TASKS PROVIDED.

the time

The current time, in minutes past midnight. Only used for games that show time on the statusline.

#### turns

The game's turn counter.

```
update moved PUNY++
```

Set this to true when using move [object] to player; (sets moved attribute & updates score).

```
verb word
```

The verb in the current input, e.g. 'take'.

wn

Word number in player input where NextWord() will read, from 1 to (num words - 1).

# **Library constants**

The Inform language defines true (1), false (0) and nothing (0). The library also defines NULL (-1), which is used for an action, property or pronoun which currently doesn't have a value. DIRECTION\_COUNT holds the number of directions recognized: Normally 8, but 12 if OPTIONAL FULL DIRECTIONS is defined.

PUNYINFORM\_MAJOR\_VERSION,
PUNYINFORM\_MINOR\_VERSION,
PUNYINFORM\_PATCH\_VERSION and
PUNYINFORM\_VERSION\_SUFFIX hold the library
version.

There are constants for colours: CLR\_BLACK, CLR\_RED, CLR\_GREEN, CLR\_YELLOW, CLR\_BLUE, CLR\_MAGENTA, CLR\_CYAN, CLR\_WHITE, CLR DEFAULT, CLR CURRENT.

The global scope\_reason schould always have one of the values PARSING\_REASON, EACH\_TURN\_REASON, REACT\_BEFORE\_REASON, REACT\_AFTER\_REASON, LOOPOVERSCOPE REASON, TESTSCOPE REASON.

## **User-defined constants**

### AMUSING PROVIDED

Offer the player to see amusing things to try after they complete the game. See Amusing entry point routine.

```
CUSTOM PLAYER OBJECT = object PUNY++
```

The player object to use instead of selfobj.

```
DEATH MENTION UNDO ~PUNY
```

Print 'undo' option even when player wins.

#### DEBUG

Use debug mode, with debug verbs and more information when something goes wrong.

```
DEFAULT CAPACITY = number PUNY++
```

The number of objects that can be held by a container or supporter that doesn't provide a value for capacity.

```
Headline = "^text^^"
```

Information about the game - genre, author, credits etc. Start with "^", end with "^^", separate sections with "^".

```
INITIAL LOCATION VALUE = object PUNY++
```

The location in which the player starts. A game must either define this, or set location in Initialise.

```
MAX CARRIED = number
```

Set the capacity of the player object (default 32).

```
MAX FLOATING OBJECTS = number PUNY++
```

The maximum number of objects that can have the found\_in property (default 32).

```
MAX SCOPE = number PUNY++
```

How many objects can be in scope at once (default 50).

```
MAX SCORE = number
```

The maximum score the player can get.

```
MAX TIMERS = number
```

The maximum number of objects which can have an active timer or daemon at the same time (default 32).

```
NO PLACES
```

Don't define the verbs 'objects' and 'places'.

```
NO SCORE = number PUNY++
```

Don't include a scoring mechanism. In z3 games, show the value of this constant as the score on the statusline.

```
NUMBER TASKS = number
```

The number of scoring tasks (default 1). See TASKS PROVIDED.

```
OBJECT SCORE = number
```

The score for objects with scored attribute the player picks up (default 4). Requires OPTIONAL SCORED.

```
OPTIONAL ALLOW WRITTEN NUMBERS PUNY++
```

Allow the player to use 'one' .. 'twenty' as numbers.

```
OPTIONAL EXTENDED METAVERBS PUNY++
```

Enable a set of nice-to-have metaverbs. See "Group 1 actions" in this document.

```
OPTIONAL EXTENDED VERBSET PUNY++
```

Enable a set of nice-to-have verbs. See "Group 2 actions" and "Group 3 actions" in this document.

```
OPTIONAL FULL DIRECTIONS PUNY++
```

Enable directions NE. NW. SE. SW.

```
OPTIONAL FLEXIBLE INVENTORY PUNY++
```

Allow player to change inventory style ("i tall/wide")

```
OPTIONAL FULL SCORE PUNY++
```

Enable the 'fullscore' verb, and optionally support for tasks (See TASKS PROVIDED).

```
OPTIONAL GUESS MISSING NOUN PUNY++
```

Make the parser fill in missing parts in player input.

```
OPTIONAL LANGUAGE NUMBER PUNY++
```

Define the LanguageNumber (n) routine.

```
OPTIONAL LIST TOGETHER PUNY++
```

Support the list together property.

```
OPTIONAL MANUAL REACTIVE PUNY++
```

The author takes responsibility for setting the reactive attribute on the right objects.

```
OPTIONAL_MANUAL_SCOPE PUNY++
```

The author takes responsibility for setting scope\_modified = true when doing something in code which may affect what's in scope.

```
OPTIONAL MANUAL SCOPE BOOST PUNY++
```

Avoid running react\_before, react\_after and each\_turn steps whenever possible, for performance.

```
OPTIONAL NO DARKNESS PUNY++
```

Rooms are always lit. Don't define the light attribute.

```
OPTIONAL NON FLASHING STATUSLINE PUNY++
```

Use a faster (and prettier?) but less compatible statusline for z5+ games.

```
OPTIONAL ORDERED TIMERS PUNY++
```

Timers/daemons are executed in order of their value for property timer order.

```
OPTIONAL PRINT SCENERY CONTENTS PUNY++
```

Make 'look' describe what's in/on containers/supporters which have the scenery attribute.

```
OPTIONAL PROVIDE UNDO PUNY++
```

Enable the 'undo' verb (z5 & z8 only!)

```
OPTIONAL REACTIVE PARSE NAME PUNY++
```

Use the reactive attribute for all objects which have the parse name property.

```
OPTIONAL SCORED PUNY++
```

Enable support for the scored attribute.

```
OPTIONAL SIMPLE DOORS PUNY++
```

Lets you define property door\_dir as an array and skip property door to for simple two-way doors.

```
OPTIONAL SHIP DIRECTIONS PUNY++
```

Enable support for 'fore', 'aft' etc. Also see variable ship directions enabled.

```
OPTIONAL SL NO MOVES PUNY++
```

Don't show moves on statusline (z5 & z8 only!).

```
OPTIONAL SL NO SCORE PUNY++
```

Don't show score on statusline (z5 & z8 only!).

```
ROOM SCORE = number
```

The score for each room with the scored attribute the player visits (default 5). Requires OPTIONAL SCORED.

```
RUNTIME ERRORS = number PUNY++
```

What to do when a runtime error occurs: 2 = Print error message, 1 = Print error code, 0 = Like 1 but also reduce checks for errors (default: 2 if DEBUG is defined, 1 if not)

```
SACK OBJECT = object
```

The object the player will automatically try to put belongings into when the player's capacity has been reached.

```
STATUSLINE SCORE PUNY++
```

Show score and moves, not time on the statusline.

```
STATUSLINE TIME PUNY++
```

Show time, not score on the statusline.

```
Story = "text"
```

Mandatory: The name of the game.

```
TASKS PROVIDED
```

Use tasks for scoring. Also define NUMBER\_TASKS, byte array task\_scores and entry point routine PrintTaskName.

## **Library routines**

Achieved(number)

Complete task number. Requires TASKS PROVIDED.

```
Banner()
```

Print the game name, serial# etc. To skip this at game start, return 2 from Initialise and call Banner later.

```
ChangeFgColour(colour) PUNY++
```

Change the foreground colour, if game is in z5+ format and colour has been enabled.

```
ChooseObjectsFinal Discard(number) PUNY++
```

Call from entry point routine ChooseObjectsFinal to remove option number (0 or higher).

```
ChooseObjectsFinal Pick(number) PUNY++
```

Call from entry point routine ChooseObjectsFinal to pick option number (0 or higher).

```
ClearScreen (window) ~PUNY
```

z5+ only. Call with argument WIN\_MAIN, WIN\_STATUS or WIN\_ALL to set colours (if clr\_on is true) and clear main and/or status window.

```
CommonAncestor(object1, object2)
```

Return the nearest object that contains both object1 and object2 on some level, or false.

```
DoorDir(object) PUNY++
```

Returns the direction in which the door object lies.

```
DoorTo(object) PUNY++
```

Returns the room which the door object leads to, or 1 if object.door\_to is a routine and it returned 1, meaning it printed a message why the player can't enter.

```
DrawStatusLine()
```

Print the statusline, in a z5 or z8 game.

```
FastSpaces(number) PUNY++
```

Print number spaces in an efficient manner.

```
ImplicitDisrobeIfWorn(object) PUNY++
```

Take off object if worn. Return false for success.

```
ImplicitGrabIfNotHeld(object) PUNY++
```

Take object if not held. Return false for success.

```
IndirectlyContains(object1, object2)
```

Return true if object1 holds object2, on some level.

## LanguageNumber(number)

**Print** number using words. Requires OPTIONAL\_LANGUAGE\_NUMBER.

## LoopOverScope(routine, actor)

Call routine once for each object in scope for actor (default: player), passing the object as a parameter.

```
MoveFloatingObjects()
```

Check which objects with found\_in should be present.

## NextWord()

Read word at position wn in player input and increment wn. Return the word, or false if empty or unrecognized.

#### NextWordStopped()

Like NextWord() except it returns -1 if wn points beyond the end of player input.

#### NumberWord(numword)

If numword is a word, e.g. 'six', representing a number 1-20, return the number. If not, return false. Requires OPTIONAL ALLOW WRITTEN NUMBERS.

## NumberWords()

Return the number of words in player input.

#### ObjectCapacity(object) PUNY++

Return the object's value for the capacity property, defaulting to DEFAULT\_CAPACITY or 100 if not defined.

## ObjectIsUntouchable(object, flag)

Return true if player can't touch object. If so, and flag is false or unspecified, also print a message.

#### ParseToken(type, data)

Use in general parsing routines. See DM4 index for examples.

### PlaceInScope(object)

Use in user-supplied scope routines to put object in scope. Ignores add to scope property and children.

### PlayerTo(object, flag)

Move player to object, which must be a room or an enterable object. If flag is 0 or omitted, print a long room description. If flag is 1, keep quiet. If flag is 2, print a room description based on the lookmode value.

### PrintContents(text, object, style) PUNY++

Recursively list contents of object. Hide items that have concealed or scenery, unless action is ##Inv. Print or run text (unless 0) before first item. If style has WORKFLAG\_BIT set, only print objects which have the workflag attribute. If it has ISARE\_BIT set, print "is" or "are" before list. If it has NEWLINE\_BIT set, print each object on a new line. Return true if any objects were listed. Call with text==1 to not print anything but return 0 if object contains no printable objects, 1 if contents can be prefixed with "is". 2 for "are".

## PrintContentsFromR(text, object) PUNY++

Like PrintContents, but list object and its siblings + contents, retaining current style and indentation.

## PrintMsg(msg, arg1, arg2) PUNY++

Print library message msg. Some messages need an argument or two, use arg1 and arg2 for this.

### PrintOrRun(object, property, flag)

If object.property holds a routine or list of routines, run them using RunRoutines (object, property). If it holds a string, print it and then a newline. If flag is true, skip the newline.

#### PronounNotice(object)

Make a pronoun ('it', 'her' etc) refer to object.

## RunRoutines (object, property, switch)

If object.property holds a routine or list of routines, run each routine until one of them returns a non-zero value. Return the return value of the last routine run. If switch has a non-zero value, the routines can have

switch-clauses to match this value, otherwise they can have switch-clauses to match action.

## ScopeWithin(object)

Use in user-supplied scope routines. Put all items which are in object into scope, also recursively searching supporters, transparent objects and open containers, and check the add to scope property of all objects added.

### SetTime(number, step)

Sets the time to number minutes after midnight. If step is a positive number, one turn takes step minutes. Otherwise, there are -step turns to a minute.

## TestScope(object, actor)

Return true if object is in scope for actor (defaults to player).

## TryNumber(wordnum)

Try to parse word wordnum in player input as a number. If successful, return the number (0-10000, higher values are returned as 10000). If it's not a valid number, return -1000. If OPTIONAL\_ALLOW\_WRITTEN\_NUMBERS is defined, also parse number words ('one'..'twenty').

## WordAddress(wordnum)

Return the address in memory where the characters for word wordnum in player input are stored.

## WordLength (wordnum)

Return the number of characters in word wordnum in player input.

### WordValue (wordnum)

Return the dictionary word that word wordnum in player input matches, or 0 if no match was found.

#### YesOrNo()

Wait for the player to type something. Return true if they typed yes, false if they typed no, or ask again.

## **Printing rules**

A printing rule is used to print something based on one argument, typically an object. Example of use: print "The pump is ", (OnOff) Pump, ".^";

Prints "The (object) ", and "is" or "are" (see IsOrAre).

## CTheyreorIts PUNY++

Prints "It's" or "They're" or "He's" etc.

#### CTheyreorThats

CObjIs **PUNY++** 

Prints "That's" or "They're" or "He's" etc.

#### IsOrAre

Prints "is" or "are", based on pluralname and if the object is the player object.

#### ItorThem

Prints "it", "them", "her" etc.

#### OnOff PUNY++

Prints "on" or "off", based on on.

#### ThatorThose

Prints "that" or "those" based on pluralname.

## **Entry point routines**

These routines, if defined by the game author, are run under the circumstances stated for each routine.

## AfterLife()

When player has died. Can be used to revive player.

## AfterPrompt()

After the input prompt has been printed.

## Amusing()

When the player has won. Use it to print fun facts about the game. Requires AMUSING PROVIDED.

#### BeforeParsing()

After player input, before parsing starts.

```
ChooseObjects(obj, code)
```

If code is 2, return a score 0-9 for how good a fit obj is for action action\_to\_be. Code 0 and 1 means player has typed ALL and parser means to exclude (0) or include (1) the object. Return 0 to don't interfere, 1 to force inclusion, 2 to force exclusion.

## ChooseObjectsFinal(array, length) PUNY++

Called just before having to ask the player which object they mean. array holds the address of a word array holding object numbers, length holds the number of objects. Use ChooseObjectsFinal\_Pick and/or ChooseObjectsFinal\_Discard to either pick an object or discard options. You may rearrange the array.

### DarkToDark()

When player moves from one dark location to another.

#### DeathMessage()

When game ends and deadflag is set to 3 or higher. Should print a few words to say why the game ended.

#### DebugParseNameObject(object) PUNY++

When the parser checks for matching objects for a debug verb like 'purloin'. Return true if object has a parse name routine.

#### DisallowTakeAnimate() PUNY++

When the player tries to take noun, which has animate. Return false to allow this, or true to disallow it.

### GamePostRoutine()

When after routines have been run.

## GamePreRoutine()

Before before routines have been run.

## InScope (actor)

When working out the scope for the actor. Call ScopeWithin and PlaceInScope to add objects to scope. Return true if no other objects should be in scope.

### Initialise ~PUNY

Mandatory: A (possibly empty) routine which is called when the game starts. May print an introduction. May return 2 to skip the game banner. Must set location, unless INITIAL LOCATION VALUE is defined.

#### LibraryMessages(number, arg1, arg2) PUNY++

When a library message is about to be printed. Use it to print your own complex library messages.

## LookRoutine

After the room and everything in it has been described.

#### NewRoom

When the player has entered a new room, before the room is described.

#### ParseNoun(object) ~PUNY

When checking if input matches object, before parse\_name and name properties are checked. Can advance wn and return -1 to consume words (parse\_name + name will also be checked), just return -1 to not interfere, or return how many words matched.

## ParseNumber(buffer, length)

When the parser needs to check if the input word that starts at buffer and is length bytes long, is a number. Return the number, or false if no number was found.

### PrintRank()

When the scoring message is printed. Prints the final part, typically giving the player a rank based on score.

#### PrintTaskName(n)

When listing a completed task. Print name of task n.

#### PrintVerb (verb)

When the parser needs to print a verb. Typically needed for long verbs. Return true if the routine printed the verb.

### TimePasses()

After a game turn has ended, in which turns increased.

## UnknownVerb (word)

When the parser doesn't recognize the verb. Return a dictionary word to use as the verb instead, or false.

## **Library objects**

### Directions PUNY++

Represents all directions. The selected\_direction variable holds the matched direction (e.g. n to) or 0.

#### selfobj

The default player object. It's better to use the player variable which normally refers to this.

### thedark

Fake room. When real\_location is dark, location points here. The player is never moved to thedark.

## **Group 1 actions**

Group 1 actions are metaverbs that control gameplay, and debug verbs. They don't run before or after routines.

Again, FullScore, LookModeLong, LookModeNormal, LookModeShort, NotifyOff, NotifyOn, Oops, OopsCorrection, Restart, Restore, Save, Score, Version, Quit

## OPTIONAL EXTENDED METAVERBS adds:

CommandsOff, CommandsOn, CommandsRead, Objects, Places, ScriptOff, ScriptOn, Verify

DEBUG adds: ActionsOff, ActionsOn, Debug, GoNear, Pronouns, RandomSeed, RoutinesOff, RoutinesOn, Scope, Purloin, TimersOff, TimersOn, Tree

# **Group 2 actions**

These actions change something in the game world or print information about it. They run before and after routines.

Close "CLOSE (noun)" "TAKE OFF (noun)" Disrobe Drop "DROP (noun)" Eat "EAT (noun)" "ENTER (noun)" Enter Examine "EXAMINE (noun)" Exit "EXIT (noun)" GetOff "GET OFF (noun)" "GO (direction)" Go

Insert "INSERT (noun) INTO (second)"

Inv "INVENTORY"

Lock "LOCK (noun) with (second)"

Look "LOOK"

Open "OPEN (noun)"

PutOn "PUT (noun) ON (second)"

Remove "REMOVE (noun) FROM (second)"

Search "SEARCH (noun)"
SwitchOff "SWITCH OFF (noun)"

SwitchOn "SWITCH ON (noun)"

Take "TAKE (noun)"

Transfer "TRANSFER (noun) TO (second)"
Unlock "UNLOCK (noun) WITH (second)"

Wait "WAIT"

Wear "WEAR (noun)"

## OPTIONAL\_EXTENDED\_VERBSET adds:

Empty "EMPTY (noun)"

EmptyT "EMPTY (noun) INTO (second)"

GoIn "INSIDE"

# **Group 3 actions**

These actions normally just print a standard message. They run before routines but not after routines.

Answer "ANSWER (topic) TO (second)"
Ask "ASK (noun) ABOUT (topic)"
AskFor "ASK (noun) FOR (second)"
AskTo "ASK (noun) TO (topic)"
Attack "ATTACK (noun)"
Climb "CLIMB (noun)"

Consult "CONSULT (noun) ABOUT (topic)"

Cut "CUT (noun)"
Dig "DIG (noun)"
Drink "DRINK (noun)"
Fill "FILL (noun)"

Give "GIVE (noun) to (second)"

Jump "JUMP"

JumpOver "JUMP OVER (noun)"
Listen "LISTEN TO (noun)"
Pull "PULL (noun)"
Push "PUSH (noun)"

PushDir "PUSH (noun) (direction)"

Rub "RUB (noun)"
Shout "SHOUT (topic)"

ShoutAt "SHOUT (topic) AT (second)"
Show "SHOW (noun) (second)"

Smell "SMELL (noun)"

Tell "TELL (noun) ABOUT (topic)"

ThrowAt "THROW (noun) AT (second)"
Tie "TIE (noun) TO (second)"

Touch "TOUCH (noun)"
Turn "TURN (noun)"

## **OPTIONAL EXTENDED VERBSET adds:**

Blow "BLOW (noun)"
Mild "DARN"
Burn "BURN (noun)"
Buy "BUY (noun)"

No "NO"

Kiss

Set "SET (noun)"

SetTo "SET (noun) TO (special)"

"KISS (noun)"

Strong "SHIT"
Sing "SING"
Sleep "SLEEP"
Sorry "SORRY"

Squeeze "SQUEEZE (noun)"

Swim "SWIM"

Swing "SWING (noun)"
Taste "TASTE (noun)"

Think "THINK"

Transfer "TRANSFER (noun) TO (second)"

Wake "WAKE UP"

WakeOther "WAKE UP (noun)"

Wave "WAVE" Yes "YES"

## **Fake actions**

These actions are not referred to anywhere in the grammar, and they don't have action routines, e.g. the fake action Going has no action routine GoingSub.

Going Sent to the before routine for the room

that the player is about to enter.

LetGo Sent to the container/supporter from

which the player takes something.

NotUnderstood Sent to creature's orders when player

issued an incomprehensible order to it.

Order Sent to creature's life when player

issued an order to it, and orders didn't

handle it.

PluralFound Aparse name routine can set

parser action to this value when a

match is found and it's in plural.

Receive Sent to the object the player tries to place

something in/on. receive action

holds the original action.

ThrownAt Sent by action ThrowAt to the object the

player tries to throw something at.

# **Object attributes (flags)**

An attribute is a flag which can be on or off. [OBJ ]means this is used for regular objects. [ROOM] means this is used for rooms.

absent [OBJ]

For object with found\_in: Removed from game for now.

animate [OBJ]

Is a living thing, can be talked to etc.

clothing [OBJ]

Can be worn.

concealed [OBJ]

Is visible but not easy to spot, like a secret door. Can be interacted with but is not printed in room description.

container [OBJ]

Objects can be put in it and removed from it, if it's open. Can't also have supporter. Can have enterable.

door [OBJ]

Is a portal between rooms. Use properties door\_to, door\_dir and, unless it's a one-way door, found\_in.

edible [OBJ]

Can be eaten.

```
enterable [OBJ]
```

Can be entered. Must have container or supporter.
female [OBJ]

Can be referred to as she/her. Must have animate.

general [OBJ] [ROOM]

To be used by the game author for whatever they like.

light [OBJ] [ROOM]

Provides light. For room and container, lights up what's inside as well. Note: This attribute is not defined if OPTIONAL NO DARKNESS is defined.

lockable [OBJ]

Can be locked and unlocked, using the object specified by with key property.

locked [OBJ]

Can't be opened.

moved [OBJ]

Is or has been held directly by the player.

neuter [OBJ]

Can be referred to as "it" (Mainly used for animate objects, as this is default behaviour for non-animates).

on [OBJ]

Is currently switched on. See switchable attribute. open [OBJ]

For doors and containers: Is currently open.

openable [OBJ]

For doors and containers: Can be opened and closed.

pluralname [OBJ]

Can be referred to as they/them.

proper [OBJ]

Has a name which should never be preceded by an article. like "John".

reactive [OBJ] [ROOM] PUNY++

The object provides at least one of add\_to\_scope, each\_turn, react\_before, react\_after (+ parse\_name if OPTIONAL\_REACTIVE\_PARSE\_NAME is defined). Note: unless OPTIONAL\_MANUAL\_REACTIVE is defined, the reactive attribute is set automatically.

scenery [OBJ]

Can't be taken, is not mentioned in room descriptions.

```
scored [OBJ] [ROOM]
```

For an object: awards <code>OBJECT\_SCORE</code> points when taken for the first time. For a room: awards <code>ROOM\_SCORE</code> points when visited for the first time. Note: Only defined if <code>OPTIONAL\_SCORED</code> is defined and <code>NO\_SCORE</code> is not.

static [OBJ]

Can't be taken.

supporter [OBJ]

Is a supporter, meaning things can be placed on top of it. Can't also have container. Can have enterable.

switchable [OBJ]

Can be switched on and off. The on attribute tells its current state.

talkable [OBJ]

Can be talked to, even though it's not animate.

transparent [OBJ]

For a container: The contents are visible even if the container is closed. For an animate object: Held objects are visible to others. For other objects: Objects that are part of this objects (i.e. are *inside* this object) are visible.

visited [ROOM]

The player has seen this room.

workflag [OBJ] [ROOM]

Temporary internal flag. Can be used by game code too. worn [OBJ]

For object that has clothing: Is currently being worn.

# **Object properties**

A property is a 16-bit value or a list of values. [OBJ] means this is used for regular objects. [ROOM] means this is used for rooms.

(+) means "additive" - if an object which defines the property inherits from a class which also defines the property, it gets both values.

```
add to scope [OBJ]
```

A list of objects that should be added to scope when this object is in scope, or a routine which puts objects in scope using ScopeWithin and PlaceInScope.

```
after [OBJ] [ROOM] (+)
```

For an object: Receives every action and fake action for which this is the noun.

For a room: Receives every action which occurs here. The property value is a routine, which usually has sections like switch-clauses, each listing one or more actions, a colon and the code to run. There can be a default clause which runs if nothing else was matched. There can also be code before the first clause, which will run regardless of action. The routine should return false to continue, telling the player what has happened, or true to stop processing the action and produce no further output.

```
article [OBJ] ~PUNY
```

A string or a routine to print the indefinite article for the object name. The default article is "some" for objects that have pluralname, nothing for objects that have proper, and "a" for all others.

```
before [OBJ] [ROOM] (+)
```

Like after, but is run before the action happens. Returning true stops the default action from happening at all.

```
cant qo [ROOM]
```

A string or a routine to print a message, when the player tries to go in a direction where there's no exit.

```
capacity [OBJ] ~PUNY
```

The maximum number of items that can be in this container, on this supporter or held by this actor. To read the capacity of an object, taking the default capacity into

consideration, you must call

ObjectCapacity(object).

```
d to [ROOM]
```

Holds a possible exit. The value can be any of:

- \* false not an exit
- \* a room where the exits leads
- \* a door object the exit leads through this door
- \* a string saying why the player can't go there
- \* a routine which either returns false, a room, a door object, or prints its own message and returns true.

```
daemon [OBJ] [ROOM]
```

A routine that is executed every turn once it is started. Use StartDaemon and StopDaemon to start/stop it.

```
describe [OBJ] (+) ~PUNY
```

A string or a routine to print a paragraph of text for an object in a room description. If it's a string or it's a routine which returns true, the object won't be further described. Not supported for rooms as in DM4. Note: Start and end the description with a newline ("^").

```
description [OBJ] [ROOM]
```

For an object: A string or a routine to print the text the player should get when examining the object. For a room: A string or a routine to print the room description.

```
door dir [OBJ] ~PUNY
```

For a door: A direction (e.g. n\_to) or a routine returning a direction. This says in which direction the door lies in location. If OPTIONAL\_SIMPLE\_DOORS is defined and found\_in holds a list with two rooms, door\_dir can be a list of two directions.

```
door to [OBJ] ~PUNY
```

For a door: A room or a routine returning a room. This says where the door leads, when the player is in location. If OPTIONAL\_SIMPLE\_DOORS is defined and found\_in holds a list with two rooms, door\_to can be omitted.

```
e to [ROOM]
```

An exit property. See d to.

```
each_turn [OBJ] [ROOM] (+)
```

A routine which is executed every turn when the object is in scope.

```
found in [OBJ]
```

A list of rooms where the object is present, or a routine which returns true if the object is present in location. If the object has absent, it's not present anywhere.

```
grammar [OBJ]
```

For animate or talkable objects: Called when object is spoken to. Can advance <code>verb\_wordnum</code>. Return <code>true</code> if routine has parsed all input and set up <code>action</code>, noun and <code>second</code>. Return 'verb' to use this verb's grammar instead, or -'verb' to use this verb's grammar but fall back to the verb in player input if parsing fails. Return <code>false</code> to parse as usual.

```
in to [ROOM]
```

An exit property. See d to.

```
initial [OBJ] [ROOM]
```

For an object: A string or a routine to describe the object before it's been picked up. Note: For doors/containers and switchable objects, use when\_open + when\_closed and when\_on + when\_off respectively. For a room: A string or a routine to print a text when the player enters the room.

```
inside description [OBJ]
```

For an enterable object: A string or a routine that will printed/run when the player is in/on the object.

```
invent [OBJ]
```

A routine to print the object in a list (typically in player inventory or a room description). First the routine is called before the object name has been printed, with inventory\_stage set to 1. Then it's called again when the object name has been printed but no additional information (e.g. "(providing light)"), with inventory stage set to 2.

For both calls, the routine should return  ${\tt false}$  to continue or  ${\tt true}$  to stop all further output.

```
life [OBJ] (+)
```

For animate objects: Works like a before routine, but receives only person-to-person actions (Answer, Ask, Attack, Give, Kiss, Order, Show, Tell, ThrowAt, WakeOther). Can be a string instead of a routine.

#### list together [OBJ] ~PUNY

Objects that have the same value are listed together in object listings. Set to a low number to print them adjacent to each other, a string to print them as a group, or (advanced) a routine to handle the printing yourself.

Can't handle identical objects. Requires

OPTIONAL LIST TOGETHER.

n to [ROOM]

An exit property. See d to.

name [OBJ] [ROOM]

A list of dictionary words. For an object, these are the words that can be used to refer to the object. For a room, these are words which should yield a reply like "You don't need to refer to that.". For an object, but not a room, the name property can be overridden by the parse\_name property.

ne to [ROOM]

An exit property. See  ${\tt d\_to}$ . Requires OPTIONAL\_FULL\_DIRECTIONS to work.

nw to [ROOM]

An exit property. See d\_to. Requires OPTIONAL\_FULL\_DIRECTIONS to work.

orders [OBJ]

For animate or talkable objects: A routine to carry out the player's orders or decline to do so. The routine should either return false, or print a message and return true to stop further processing. The player object's orders routine is called first, and then the addressed object's orders routine is called.

out to [ROOM]

An exit property. See d to.

parse name [OBJ]

A routine to parse player input and decide if it matches this object. The routine calls <code>NextWord()</code> and/or <code>NextWordStopped()</code> to read words and returns the number of words that match, 0 for no match or -1 to say it chooses not to decide (i.e. the <code>name</code> property will be consulted, if provided).

react after [OBJ]

Like after, but receives all actions taking place when this object is in scope.

```
react before [OBJ]
```

Like before, but receives all actions taking place when this object is in scope.

s to [ROOM]

An exit property. See d to.

se to [ROOM]

An exit property. See  ${\tt d\_to}$ . Requires  ${\tt OPTIONAL\_FULL\_DIRECTIONS}$  to work.

short name [OBJ]

A string or routine to print the short name of the object, overriding the name provided in the object's name string. The routine should return true to signal that it has printed the name, or false to say that the library should still print the object's name string. Sometimes it's useful to print a prefix (e.g. an adjective) and return false.

sw to [ROOM]

An exit property. See d\_to. Requires OPTIONAL\_FULL\_DIRECTIONS to work.

time left [OBJ] [ROOM]

For an object which has a time\_out property: After StartTimer(object, turns) has been called, time\_left holds the number of turns left before time out will be called.

For other objects/rooms: Use it as a general variable.

time out [OBJ] [ROOM] (+)

A routine to be called when a timer times out. Start the countdown with StartTimer(object, turns).

timer order [OBJ] [ROOM] PUNY++

A number that determines when this object's timer/daemon executes relative to other timers/daemons. The lower the earlier. Objects that don't provide it have the value 100. Requires OPTIONAL\_ORDERED\_TIMERS.

u to [ROOM]

An exit property. See d to.

w to [ROOM]

An exit property. See d to.

when closed [OBJ]

For doors and containers: A string or routine to describe the object when it's closed.

```
when off [OBJ]
```

For a switchable object: A string or routine to describe the object when it's off.

when on [OBJ]

Like when\_off, but for when it's on. Not used if the object has moved.

when open [OBJ]

Like when\_closed, but for when it's open. Not used if the object has moved.

with key [OBJ] ~PUNY

For lockable objects: The object which works as a key, or a routine which returns true if the object held in second works as a key.

## **About this document**

This is meant to be printed out and serve as a quick index to all the functionality that the PunyInform library provides. A similar document for the Inform 6 language is Inform in Four Minutes, available at http://www.firthworks.com/roger/

This is not meant to be a document from which to learn PunyInform, a replacement for The Inform Designer's Manual, Fourth Edition (DM4) or the PunyInform manual and tutorials. To keep it short, this document leaves out finer details. Always consult DM4 and/or the PunyInform manual to get the full picture (See Legend below).

Created and maintained by Fredrik Ramsberg. Improvement suggestions by Garry Francis, Johan Berntsson and Nick Moffitt.

Based on InfoLib at Your Fingertips by Roger Firth.

## Legend

Items marked PUNY++ aren't described in DM4. Items marked ~PUNY don't work exactly as described in DM4. See PunyInform manual for details on these items.
